PROFESSIONAL SUMMARY

CRM systems lead who builds the CRM into the operating backbone of a sales organisation, not just administers it. I own a Freshsales CRM end to end (data structure, pipelines, deal stages, routing rules, automations, permissions and reporting) and design and build the custom integration layer around it myself.

I built and launched the SQL Conversion Machine, a production system that runs lead distribution, SLA-driven task creation, lead scoring, automatic reassignment of untouched leads, multichannel nurture and reactivation, and live management dashboards. Every salesperson's day starts in the CRM, and every signal (a new lead, a missed SLA, a cooling prospect) becomes a clear next action. I bring the rare mix of sales-operations process design and full-stack engineering, so integrations with platforms, back office and marketing tools are built, not waited on.

CORE COMPETENCIES

- **CRM ownership:** data structure, custom fields, pipelines and deal stages, permissions and roles, data governance
- **Retention and reactivation:** inactivity-based segmentation, automatic reassignment, reactivation nurture programmes
- **Marketing alignment:** source, UTM and journey-stage capture on every record, lead scoring and grading in the CRM
- **Integrations:** REST APIs and webhooks between CRM, telephony, email, SMS gateways, messaging and custom backends
- **Sales processes:** automatic lead and client distribution (round robin), SLA task automation, ownership rules, cooling-lead alerts
- **Partner workflows:** referral-partner onboarding, territory and assignment rules, partner-specific inbox and reporting
- **Multichannel automation:** email, SMS and WhatsApp sequences, bulk broadcasts, opt-out and suppression management
- **Reporting and adoption:** management and team KPI dashboards, usage standards, user guides, team training and role-based access

PROFESSIONAL EXPERIENCE

CRM Systems Lead / CRM Developer — Harmony Garden

2026 – Present · Real estate sales organisation with SDR, closer and partner (realtor) teams across 7 product lines

CRM ownership and implementation

- Own the company's Freshsales CRM end to end: data model, pipelines, deal stages, automations, roles, permissions and reporting.
- Designed and launched the SQL Conversion Machine (Node.js, Express, MongoDB, Freshsales, SendGrid), live in production since October 2026, and consolidated three legacy apps into one system.
- Led data governance: cut about 95 deal fields to 5 decision-critical fields and standardised MQL, SAL and SQL definitions.
- Built routing that places every inbound lead in the correct pipeline across 7 product pipelines by source and product, verified end to end with test leads.

Data quality and duplicate control

- Built a Freshsales Clean-up system: a read-only mirror of all contacts, deals, pipelines and fields, a field-usage audit, and cleaning rules that only propose approvable, undoable change batches, never silent edits.
- Built duplicate detection across contacts, plus a "created by a call" finder that matches phone-number-named records (created when reps dial unmatched numbers) to the real lead by normalised phone number for merging.
- Diagnosed failed lead creation caused by existing mobile numbers, so duplicate leads are caught instead of lost.
- Automatically created company accounts from work-email domains and linked their contacts; flagged non-buyer records (newsletters, apps, vendors) for review instead of deleting them.
- Added a data-health dashboard and a nightly re-read window, so bulk audits never starve the live sales system's API budget.

Sales processes

- Built automatic lead distribution: an SDR round robin that skips reps who are off, with ownership protection so a rep already working a lead is never overridden.
- Implemented SLA-driven task automation: an MQL submission stamps the time and creates a 30-minute accept/reject task for the SDR team.
- Built a lead scoring engine (CRM webhook to a Node service) that writes a score and grade (Priority SQL, SQL, MQL, Nurture) to each record, applies auto-qualify override rules, and creates prioritised follow-up tasks with SDR alerts.
- Built a confirmation and rescheduling flow for booked appointments, so reps see confirmed meetings and reschedules directly in the CRM.

Retention and reactivation

- Built automatic reassignment: any lead with no activity 24 hours after entry moves to the next rep, with escalation to the senior closer after two moves.
- Automated routing of disengaged leads ("not interested" outcomes) out of active sequences and into a 20-email reactivation programme.

Partner (referral channel) management

- Set up CRM workflows for the realtor partner network, which refers buyers to the business: territory, automatic record ownership and dedicated sender identities.
- Separated direct-sales and partner conversations with role-based team inboxes, so each team sees only its own channel.

Marketing alignment

- Ensured every record carries its source, landing page, UTM data, product interest and grade, so a rep opening a contact sees where the client came from and how hot they are.
- Integrated social DMs, WhatsApp and web forms into the CRM, and built an AI reply layer for the chat inbox with human-takeover rules.

Reporting and performance

- Built real-time management dashboards covering registrations, funnel conversion, allocation status, product breakdown and per-rep stalled-lead accountability.
- Delivered read-only MD and agency KPI dashboards embedded inside the CRM for leadership, with per-agency scorecards graded A to D.
- Integrated Freshcaller call data so every call is counted correctly in reports, dashboards and automation, and built a Calls page and call-log report (outcome, duration, direction, notes, recordings) for rep accountability.

Adoption

- Wrote the user guide and trained the SDR team on the new system; set ownership and usage standards.
- Configured the company HRMS for 36 staff (approval routes, roles, onboarding), driving organisation-wide adoption.

SEQUENCES AND NURTURE PROGRAMMES

Designed, built and ran the full lifecycle of automated sequences, from first contact to conversion to reactivation, with every step tied to a CRM owner and a next action.

Programme	Channel	What it does
SQL conversion nurture	Email	16-step sequence personalised per product line (dynamic banners and fields), driving prospects to confirm a sales appointment
Conversion email sequences	Email	16 sequences supporting the SDR team through the qualification-to-sale funnel
WhatsApp sequences	WhatsApp	16 sequences for follow-up, including approved template messages to re-open conversations after the 24-hour window closes
LinkedIn Sales Navigator outreach	Email	9 sequences for outbound prospecting
SMS sequences	SMS (Sendchamp, Termii, Twilio)	Rules-driven SMS sequences connected to Freshsales that react to replies, clicks and delivery status
Rep call cadence	Calls + email	3 timed rep calls per prospect (48 hours before, 24 hours before, and the morning of the appointment), with reminders sent from the prospect's own rep
Appointment confirm and reschedule	Email + web	Confirm and reschedule pages that update the CRM and alert the rep instantly
Client reactivation	Email	20-email long-term nurture; disengaged prospects are routed into it automatically
International (diaspora) buyer sequences	Email	Rebuilt as a multi-sequence module inside the main system, replacing a standalone app
Product nurture packs	Email + WhatsApp	Follow-up sequences for 4 product lines, built from approved templates
Weekly email programme	Email	Migrated from a legacy app with full send history, unsubscribes and analytics
Event-based multichannel sequences	Email, SMS, WhatsApp	Steps across channels in any order; a reply on any channel stops the rest, an opt-out removes the person entirely, and the owner gets a CRM task and alert

- Tracked replies from prospects and reps through inbound email parsing, feeding reply data into sequence analytics.
- Set sender rules so nurture emails come from the brand and reminders come from the prospect's own rep, keeping the relationship with the rep.

SMS automation connected to Freshsales

Designed and built a rules-driven SMS sequence engine (PHP, MySQL) integrated with Freshsales, sending through Sendchamp, Termii or Twilio from one interface.

- **Gateways:** switchable between Sendchamp, Termii and Twilio, with DND, non-DND and international routes, delivery reports and a reply webhook.
- **Sending controls:** template groups sent on set days, sending windows and days, a daily cap per person, and a character and SMS-part counter.
- **Behaviour triggers:** reacts to a reply (any reply or specific keywords), a link click, no reply or click after X days, a delivered message or a failed one.
- **Actions in Freshsales:** stop, jump to another message, move to another group or pause; set a Freshsales field; assign the lead to one person, a team or round robin, with a Freshsales task and email or SMS alert to the owner.
- **Link tracking:** links shortened through a branded short domain, with clicks pulled back into the sequence logic.
- **Compliance and protection:** STOP and opt-out keywords honoured automatically, and a paid-customer check against Freshsales so existing clients are never chased by acquisition messages.

This engine is the blueprint for the event-based multichannel sequences (email, SMS through Sendchamp, Termii or Twilio, and WhatsApp through Freshchat templates), with test mode, a send-volume preview and a per-person journey timeline before anything goes live.

Bulk sends and broadcasts

- Built a Bulk Sends module for one-off email broadcasts to segments, with a shared do-not-email list respected by every sequence and broadcast.
- Built sequence audiences from Excel uploads or saved Freshsales views, with placeholder personalisation checked so no email goes out with an empty or wrong value.
- Built a WhatsApp broadcast and sequence tool (Node.js, Tailwind CSS) on Freshchat's outbound messaging API, with bulk sending, sequences and delivery analytics.
- Retired a legacy bulk email campaign system cleanly: archived its full data, kept per-sender and per-email summaries, and moved about 26,000 opt-outs into global suppression to protect deliverability.

SELECTED SYSTEMS BUILT

System	What it does	Stack
SQL Conversion Machine	Lead distribution, scoring, SLA tasks, auto-reassignment, nurture and reactivation, call confirmation, bulk sends, KPI dashboards	Node.js, Express, MongoDB, Freshsales API, SendGrid, Freshcaller API
SMS sequence engine	Rules-driven SMS sequences with Freshsales actions, link tracking and opt-out handling	PHP, MySQL, Sendchamp, Termii, Twilio, Freshsales API
Lead scoring service	Scores and grades each lead on entry, writes results to the CRM, creates prioritised rep tasks	Node.js, CRM webhooks
CRM clean-up system	Audits all contacts, deals and fields; detects duplicates, fills gaps, flags non-leads and scores records without deleting data	Node.js, Freshsales API
WhatsApp broadcast tool	Bulk WhatsApp sending, sequences and analytics	Node.js, Tailwind CSS, Freshchat API
Management KPI dashboard	Real-time funnel, allocation and per-rep accountability views for leadership	Node.js, Express
AI chat-inbox assistant	Drafts replies to social and WhatsApp messages, hands over to a human on a timer	Node.js, OpenAI API, Freshchat

TECHNICAL SKILLS

- **CRM and sales tools:** Freshsales, Freshmarketer, Freshchat, Freshcaller, SendGrid, LinkedIn Sales Navigator, WhatsApp Business messaging, Sendchamp, Termii, Twilio
- **Development:** JavaScript, Node.js, Express, MongoDB, PHP, MySQL, React, Next.js, HTML, Tailwind CSS, REST APIs, webhooks
- **Deployment and tooling:** Git and GitHub, Render, Hostinger, MongoDB Atlas
- **Practices:** technical requirements documents (TRDs), staged rollouts with trial modes, test-lead verification, user guides and training

EDUCATION

- **Diploma in Software Engineering** — SQI College of ICT, Osogbo, 2025
- **B.Sc. Microbiology (Industrial Biotechnology)** — Caleb University, Imota, 2025
